Summary

Software Engineer III with 5+ years at Walmart Global Tech specializing in Java-based backend systems, payment authorization, order management, and high-scale distributed microservices (Java, Kafka, Kubernetes, Azure Cosmos DB). Proven track record delivering initiatives with measurable revenue impact, leading complex system migrations, and actively leveraging AI tools to accelerate development.

Experience

Walmart Global Tech — Software Engineer III | Bellevue, WA | Apr 2021 – Present

CPC Order Management *Jan 2026 – Present*

- Implemented W+ Photo Benefits initiative, writing backend business logic to validate membership entitlements and apply discount rules within the order creation flow.
- Delivered Tax Modernization changes across the order pipeline, updating tax computation and recording logic to meet updated compliance requirements.
- Executed migration from Record Sales to direct Sales Order flow — refactored service logic, coordinated cross-team alignment, and deployed with zero downtime.
- Managed production support and releases for the CPC order service, triaging incidents, investigating logs, and ensuring reliable deployments in a high-throughput checkout environment.

CPC Authorize Orchestrator *May 2025 – Dec 2025*

- Analyzed threading bottlenecks and redesigned the ThreadPool executor configuration in Java, cutting total thread count by 50% and significantly improving CPU and memory efficiency under peak load.
- Implemented Walmart Cash DeferredAuth to support deferred payment authorization workflows in Java, and led Telecheck UPP migration transitioning legacy payment verification to a modern platform.
- Architected Splunk-to-OpenObserve alerts migration, rebuilding monitoring dashboards and alert rules to improve system observability and reduce alert noise.

Order Management System Sales Order *Apr 2021 – May 2025*

- Engineered core Java backend components of Walmart's Order Management System, a high-throughput microservices architecture processing 2M+ daily customer orders with high availability and fault tolerance.
 - Built scalable Java services for high-revenue initiatives: Pharmacy Delivery (\$14B projected FY29 front-end sales, 4.2M patient reach), Local Marketplace DriverTip (\$90B five-year serviceable market), and OTP verification for high-value items (\$8M annual GMV loss prevention).
 - Architected event-driven microservices using Kafka for asynchronous processing and service decoupling; built and optimized Azure Cosmos DB and Oracle DB data pipelines for performance and scalability.
 - Led code reviews for 300+ pull requests enforcing quality, security, and architectural standards; mentored new hires on Java microservices design and Walmart engineering workflows.
-

Skills

Languages & Tools: Java (primary), SQL, JavaScript, Spring Boot, Apache Kafka, Git, Maven, npm, Postman

Infrastructure: Kubernetes, Azure Cosmos DB, Oracle DB, Walmart Cloud Native Platform (WCNP)

Observability & Practices: Splunk, OpenObserve, Microservices, RESTful APIs, TDD, Agile/Scrum, JIRA

AI Tools: Claude, GitHub Copilot, Code Puppy

Education

M.S. Information Science | Trine University, Phoenix, AZ | *GPA: 3.7/4.0 | May 2024*

B.S. Computer Science | Miami University, Oxford, OH | *GPA: 3.5/4.0 | May 2020*

Accomplishments

- **Walmart Bravo Award** Oct 2024 | Engineering Excellence
- **Walmart Bravo Award** Aug 2023 | Value — Fast and Continuous Improvement
- **Walmart Excellence Award** Jun 2022 | Innovation and Collaboration
